

SUPERIOR SEAL & PAVING, INC.

PO BOX 411 * FAYETTEVILLE, NY 13066

OFFICE (315) 637-5555 * FAX (315) 437-4511

DRIVEWAY AFTERCARE

1. **Don't put car(s) on the driveway for at least 1 week! And don't walk on it for 2 days!**
2. **For a period of time, the driveway might show areas of roller marks, footprints, or tamp marks, etc. This is normal as asphalt cures; these areas will become less and less noticeable.**
3. **Don't turn the car's front wheels while standing still, particularly with power steering (car must be in motion). This causes the asphalt to smudge, flake and become porous.**
4. For a period of time there will be surface porosity and tire marks, in time the pores will seal and the asphalt will cure, and the tire marks will disappear.
5. **Don't park the car in the same spot each time. Change its' position each time you park to prevent displacement.**
6. **Don't put dirt on sides of driveway for at least one full year, unless you put plastic down first.**
7. On occasion weeds and grass will grow through asphalt. The County Agricultural Dept. suggests you use a weed killer. We cannot be responsible for this and suggest you contact the County Agricultural Dept. for further information.
8. Sometimes after paving is completed, your lawn may be higher or lower than the new driveway.
9. **Don't allow gas to leak or spill on driveway. This will dissolve the asphalt from the stone and create an unsightly hole.**
10. **Don't seal your driveway until 2 years after topping is applied.**

We appreciate your business and want you to be a satisfied customer.
